SUMMARY

iOS engineer with 7+ years building consumer mobile apps, most recently on Muslim Pro (100M+ installs), where I migrated the Quran feature from UIKit to SwiftUI. Strong in SwiftUI and UIKit, native platform integration, in-app purchase and ad monetization, and reusable modules — including an integration framework adopted across 20+ apps and an open-source SwiftUI layout package.

HIGHLIGHTS

- **3x ad revenue in three months** — built a custom waterfall ad mediation layer, rolled out in phases from minor titles to flagships
- **UIKit to SwiftUI migration** — first on the Muslim Pro team to ship production SwiftUI, then migrated the Quran feature to it
- **20+ titles on one framework** — architected a reusable integration layer; a new title was integration-ready in about two hours

TECHNICAL SKILLS

Languages Swift, Java, C# (also Objective-C, C++, JavaScript, SQL)

iOS SwiftUI, UIKit, Auto Layout (programmatic), Swift Concurrency (async/await), Combine, StoreKit / In-App Purchase, WidgetKit, Push & Local Notifications, Keychain, Core Haptics, REST APIs, App Store Connect

Architecture MVVM, MVC, protocol-oriented design, modular Swift packages, SOLID principles

Tooling & Delivery Xcode, Swift Package Manager, CocoaPods, Fastlane, CI/CD, Git, GitHub

Analytics & Experimentation Firebase Analytics, Crashlytics, Remote Config, A/B Testing, Tenjin

AI-Assisted Development Claude Code, Gemini CLI, agentic coding workflows

Cross-platform Unity (C#), Cocos2d-x, Android (Java), native plugin and bridge development

EXPERIENCE

Software Engineer (iOS) | Bitsmedia Pte Ltd | March 2024 – August 2026

Singapore-based publisher of Muslim Pro (100M+ installs). Worked from Bitsmedia's Dhaka office with international teams.

- **Migrated Muslim Pro's Quran feature from UIKit to SwiftUI**, deliberately deferring the high-risk reader page to a later phase.
- **First on the team to ship production SwiftUI**, bridging new screens into the existing UIKit navigation via `UIHostingController`.
- **Built a custom staggered-grid layout** for the Inspiration feature and published it as an open-source Swift package (`LazyStaggeredGrid`), consumed via SPM.
- **Shipped Ummah Pro**, the in-app community feature — posting, comments, reactions, and sharing — across profile, post detail, reaction breakdown, and enrollment screens, mainly in UIKit with SwiftUI cells.
- Built Quran reading history and duration tracking, the Qalbox Courses feature (rails landing, course and author detail), and the complete search experience for the new Dua feature, including saved items.
- Maintained and extended UIKit screens — table view cells, paged table views, new view controllers — favouring programmatic UI over XIB and storyboards.
- Adopted Swift Concurrency for new networking code and bridged legacy completion-handler APIs to `async/await` using continuation wrappers.

- Contributed to the in-app livestream feature built on Tencent's streaming SDK, handling client-side integration and fixes through Ramadan and Eid traffic peaks.
- Triageed and resolved production crashes with Firebase Crashlytics, and used Claude Code daily to speed up feature work and refactoring.
- Mentored newer engineers and conducted code reviews while working with teams across time zones.

Software Engineer | Free Pixel Games Ltd. | *December 2018 – March 2024*

Mobile studio publishing 20+ titles to the App Store and Google Play.

- **Built a custom waterfall ad mediation layer that tripled ad revenue within three months**, rolled out in phases from minor titles to flagship games to limit risk.
- **Architected a reusable integration framework** for ads, analytics, in-app purchase, and platform services, adopted across **20+ shipped titles** — a new title was integration-ready in about two hours.
- **Introduced Firebase to the company**, replacing Google Analytics and a custom Heroku analytics server, and enabling the studio's first A/B testing through Remote Config.
- **Built and maintained an internal SwiftUI app** for company leadership, aggregating revenue and analytics across the portfolio with per-title breakdowns — sole developer.
- Wrote native bridges for SDKs lacking engine support: Objective-C wrappers with C# interop, Android plugins in Java, and automated post-build Xcode and Info.plist configuration.
- Integrated StoreKit, Google Play Billing, AdMob, AppLovin, Meta Audience Network, and Tenjin; implemented widgets, push and local notifications, in-app search, review prompts, and haptics.
- Mentored new engineers as they joined the team.

SELECTED PROJECTS

LazyStaggeredGrid — open-source SwiftUI package for Pinterest-style staggered grids, vertical and horizontal, with pluggable chunking strategies. Used in production at Muslim Pro.

Swift, SwiftUI, SPM | github.com/theashiq/LazyStaggeredGrid

Picasso Pro — text-to-image app built in parallel SwiftUI and UIKit implementations.

Swift, SwiftUI, UIKit | github.com/theashiq/PicassoPro

Published Titles — built the monetization, analytics, and native iOS integration for Police vs. Thief 3D, Sea Monster City, and other Free Pixel Games titles on the App Store and Google Play.

Unity (C#), Cocos2d-x, Objective-C, Java | apps.apple.com/us/app/id1542502766

EDUCATION

BSc in Computer Science and Engineering — United International University | CGPA 3.78 / 4.00 | 2018

HSC, Notre Dame College (GPA 5.00 / 5.00, 2012) | SSC, Mohadevpur SM High School (GPA 5.00 / 5.00, 2010)

PUBLICATION
