SUMMARY

iOS engineer with 7+ years shipping consumer mobile applications to hundreds of millions of users. Delivered features for Muslim Pro (100M+ installs), introducing SwiftUI into a long-lived production codebase where all other development was UIKit and storyboard-based. Deep experience in native platform integration and monetization infrastructure across Swift, Objective-C, Java, and C# — including a custom ad mediation layer that tripled ad revenue and a shared integration framework reused across 20+ shipped titles.

TECHNICAL SKILLS

Languages Swift, Objective-C, C#, Java, C++, JavaScript, SQL

iOS UIKit, SwiftUI, Swift Concurrency (async/await), Combine, StoreKit / In-App Purchase, WidgetKit, Push & Local Notifications, Core Haptics, App Store Connect

Architecture MVVM, MVC, protocol-oriented design, reusable module design, SOLID principles

Tooling & Delivery Xcode, Fastlane, CI/CD, Git, GitHub, Sourcetree, Jira

Analytics & Backend Firebase, Crashlytics, Tenjin, REST APIs, MySQL

Cross-platform Unity (C#), Cocos2d-x, Android (Java), native plugin & bridge development

EXPERIENCE

Software Engineer (iOS) | Bitsmedia Pte Ltd | *March 2024 – August 2026*

Singapore-based publisher of Muslim Pro, one of the most downloaded faith applications worldwide.

- **Developed and maintained features for Muslim Pro (100M+ installs)**, a long-lived production codebase carrying substantial accumulated technical debt.
- **Introduced SwiftUI into the production application**, building all assigned feature UI declaratively while the rest of the team worked in UIKit, XIB, and storyboards — bridging new screens into the existing UIKit navigation stack via UIModalPresentationStyle.
- Contributed to the **in-app livestream feature** built on Tencent's live-streaming infrastructure, handling client-side SDK integration and defect resolution through Ramadan and Eid traffic peaks; viewer sessions averaged one hour.
- Modernized asynchronous code by migrating completion-handler patterns to **Swift structured concurrency (async/await)**, reducing callback nesting and consolidating error handling across affected modules.
- Triageed, reproduced, and resolved production defects using Firebase and Crashlytics, helping sustain a **99.5%+ crash-free session rate** across releases.
- Designed and integrated new features end to end, from technical specification through App Store release.
- Conducted code reviews and coordinated delivery with distributed teams across multiple time zones.

Software Engineer | Free Pixel Games Ltd. | *December 2018 – March 2024*

Mobile application studio publishing to the App Store and Google Play.

- **Designed and built a custom waterfall ad mediation layer, increasing ad revenue by over 3x** across the company's application portfolio.
- **Architected a reusable cross-app integration framework** covering ads, analytics, in-app purchase, and platform services — adopted across **20+ shipped titles** with little to no modification, bringing a new title to integration-ready in roughly two hours.
- **Wrote native bridges for SDKs lacking first-party engine support**: Android plugins in Java, Objective-C wrappers with C# interoperability, and automated post-build Xcode project and Info.plist configuration.
- Integrated monetization and attribution stacks including **StoreKit**, Google Play Billing, AdMob, AppLovin, Meta Audience Network, Firebase, Tenjin, and Crashlytics.

- Implemented native iOS platform features: **App Store review prompts, in-app search, widgets, local and push notifications, and haptic feedback.**
- Shipped and maintained titles on the App Store and Google Play across Swift, Objective-C, C++, C#, and Java codebases.

Game Programmer (Part-time) | Good Game Idea | *September 2022 – May 2023*

- Built and released mobile applications in Unity3D (C#), handling in-app purchase, ad SDK, and analytics integration for both the App Store and Google Play.

SELECTED PROJECTS

Picasso Pro — text-to-image generation app built in parallel SwiftUI and UIKit implementations, with sharing and photo library export.

Swift, SwiftUI, UIKit, Stable Diffusion API · github.com/theashiq/PicassoPro

RockPaperScissors — real-time online multiplayer game for iOS with matchmaking and live opponent play.

Swift, SwiftUI · github.com/theashiq/RockPaperScissors

Privy — cross-browser privacy extension published on Firefox Add-ons. Single source tree with per-browser manifests and a custom Node.js build script producing versioned Chromium and Firefox bundles.

JavaScript, Node.js, WebExtensions API · github.com/theashiq/Privy · addons.mozilla.org/en-US/firefox/addon/privy

Published Titles — Police vs. Thief 3D, Jurassic Sniper 3D, Sea Monster City and others, live on the App Store and Google Play.

Unity3D, Cocos2d-x, Objective-C, C++, Java · apps.apple.com/us/app/id1542502766

EDUCATION

BSc in Computer Science and Engineering — United International University

CGPA 3.78 / 4.00 · 2018

HSC, Notre Dame College (GPA 5.00 / 5.00, 2012) · SSC, Mohadevpur SM High School (GPA 5.00 / 5.00, 2010)

PUBLICATION

PRESa2i: Incremental Decision Trees for Prediction of Adenosine to Inosine RNA Editing Sites

Choyon A, **Rahman A**, Hasanuzzaman M, Farid DM, Shatabda S. *F1000Research*, 2020; 9:262.

doi:10.12688/f1000research.22823.1

Undergraduate thesis. Machine learning tool for RNA editing site prediction; 86.48% accuracy on an independent benchmark.
